W

hen dealing with current harsh real estate market conditions there are sadly few quick and viable avenues to realize a significant lowering of any construction costs. Usually one assumes that their project is getting less when any vendor offers such a massive cost reduction. Massive to China Steel Partners means millions of dollars per project. Our global strategy in forming this consortium rejects such provincial notions of “less means less” and we now will prove that “less means more”. China Steel Partners has formed a new consortium of China foundries and fabricators for the production and delivery of fabricated steel. By partnering highly experienced professionals from the US and China, we are able to offer the lowest prices in the marketplace while preserving safety and assuredness of delivery. Our customers will have vast experience within the US construction industry and accordingly are well equipped to recognize the substantial cost savings of China steel production using only the best and most experienced China steel foundries and fabricators. Combining the consortium members vast steel assets with USA customers creates a project that gets steel fast at great savings. The end result is a higher quality fabricated steel project delivered to your site at up to 30% cost savings compared to traditional USA based bids. We can deliver, in many cases, initial deliveries within 100 days of shop drawing acceptance.

China Steel Partners consortium members possess staggeringly vast steel assets from

the iron ore, to the foundry, and onward to their fabrication plants. Consortium members employees exceed 60,000 and they can be quickly working for your project. The typical fabrication plant is approximately one million square feet and there are many such plants in the consortium. The power of the consortium means meeting your structural steel needs faster, and that translates into saving you more money. Upon receipt of your structural plans we can deliver an initial bid in as little as 14 days and complete a final bid in less than 30 days. Our bid can meet any requirements you demand as the consortium members have met all imaginable requirements in their lengthy production history. Please visit our website at chinasteelpartners.com

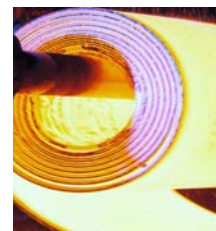

Our China-based partners are proud of their country's ability to produce about 40% of the world's steel tonnage. Our consortium partners are strategically located to enjoy low shipping costs of the final steel product. Our consortium is vertically integrated from foundry to delivery. While the consortium is newly formed, the experience and asset base of the partners is vast and powerful. The range of expertise of our members and management is global and exceeds many billions of dollars annually of managed materials and funds.

Our China partners are already global players and share our USA born vision for quality and performance for our USA domestic consumption. USA steel sources will always be 100% “sold-out” due to the domestic demand and we stand ready to alleviate USA shortages with China steel products. We encourage and offer third party inspection during the foundry process and steel fabrication process, as well as any

internal company inspection you desire to have present during your entire material creation. Our goal is to earn your continued business with China Steel Partners.

“The ability to deliver cost efficiency to steel markets and assist those seeking lower costs and more rapid delivery is a most satisfying and rewarding task for our consortium” said Ed Epstein, president of China Steel Partners and one of the founders of the consortium.

Consortiums are long proven successful as business models and allow for measurable benefits especially cost and speed of delivery. Further expected growth of consortium partners' numbers will deliver greater steel fabrication volumes while keeping prices low. China Steel Partners strongly believes in a continuation of globalization and consolidation of steel sources, fabrication, and cost effective producers. We also believe lenders will prove more severe in their analysis of a project's viability in today's vicious financing markets and any cost savings may prove pivotal in obtaining needed sources of capital. China Steel Partners is finding interest by potential buyers of our consortium's products that cannot be overstated. Capture your share of the bottom line savings.

Steel is a global market today
